

BASE OF BICYCLE SADDLE

ABSTRACT OF THE DISCLOSURE

A base of a bicycle saddle comprises a main body made of a rigid plastic material. The main body is provided with at least one receiving space corresponding in location to the sitting area of bicyclist and a plurality of supporting bars suspended in the receiving space and defining a plurality of hollows. The base further comprises an elastic body made of a plastic material having a hardness smaller than the hardness of the plastic material of which the main body is made. The elastic body is filled in the receiving space by molding such that the hollows are enclosed by the elastic body, and the elastic body is firmly connected to the main body.
